Try color by number

Test the pencils or markers you plan to use

1 Choose by palette size

3 COLORS

Geometric Tile Pattern

32 numbered regions

5 COLORS

Sunflower

Large petals and leaves

6 COLORS

Christmas Tree Window

40 numbered regions

2 Test your actual supplies

Print the worksheet in the paper size that fits your printer. Before coloring, test each color from that page's printed key with your own pencil or marker in a blank box below. Write the tool or color name you used; colors can look different on paper.

Color 1	Color 2	Color 3	Color 4	Color 5	Color 6

3 Follow the key, then compare

1. Match each printed number to its color in the worksheet key. Use your tested tool, and keep the same color for each matching number.
2. Leave spaces without a number as shown by the printed artwork; some areas are intended to remain white.
3. When finished, turn to the answer sheet and compare the color placement.
