Draw a mushroom

Complete phone guide · 7 drawing pictures

Follow every picture in order. Fit the page to your screen width; swipe to continue.

Paper and pencil.

Orange: new marks. Black: keep. No temporary guides to erase.

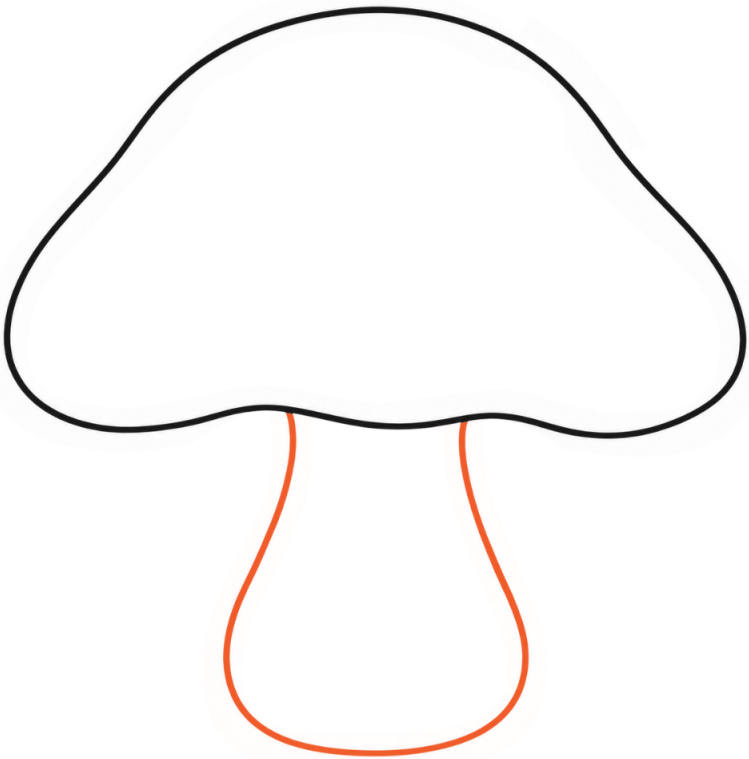

1. Draw the cap

Draw a wide dome. Join its ends with a shallow, wavy curve to close the cap.

> The cap is one closed shape.

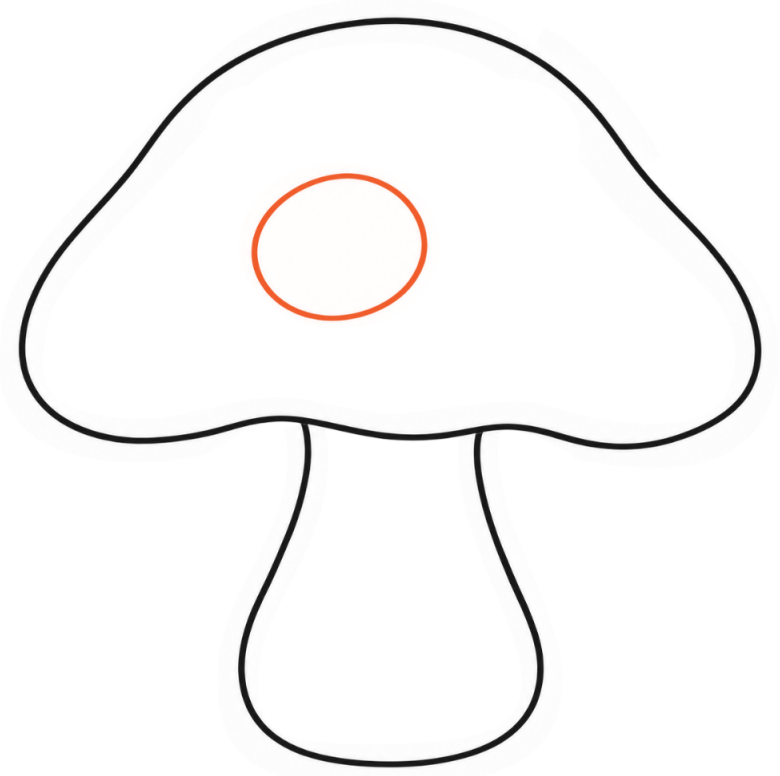

2. Add the stem

Start two curves at the cap's lower edge. Widen them toward the bottom and join them with a rounded base.

> Stop both sides at the cap edge; do not draw inside it.

3. Draw the first spot

Make one large rounded spot slightly left of the cap's center. Close the loop.

> Leave clear space between the spot and the cap edge.

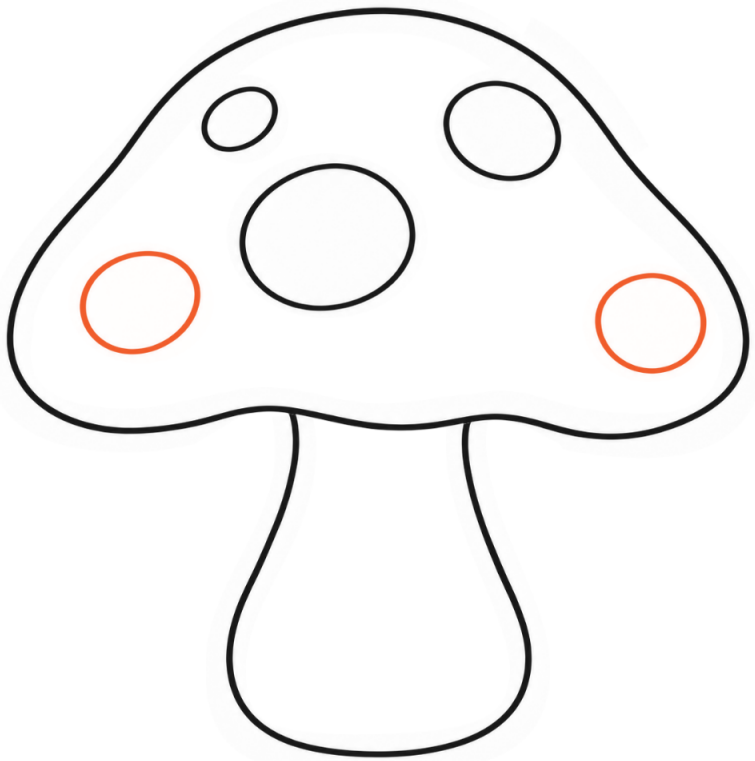

4. Add two upper spots

Draw a small oval above-left and a larger one above-right. Keep both completely inside the cap.

> Neither spot touches the cap or another spot.

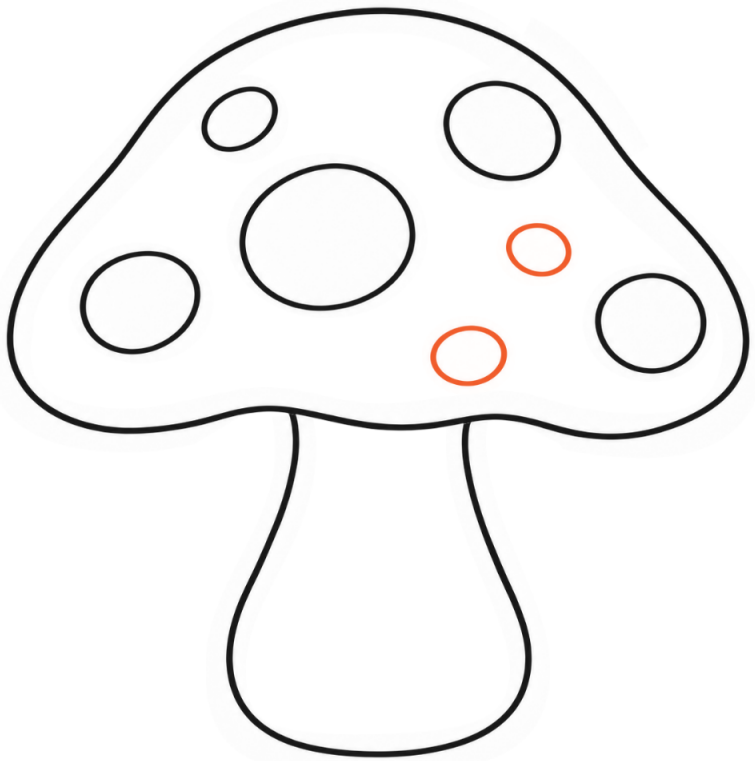

5. Fill the side spaces

Add one rounded spot on each side of the cap, at slightly different heights.

> Keep a visible margin around each spot.

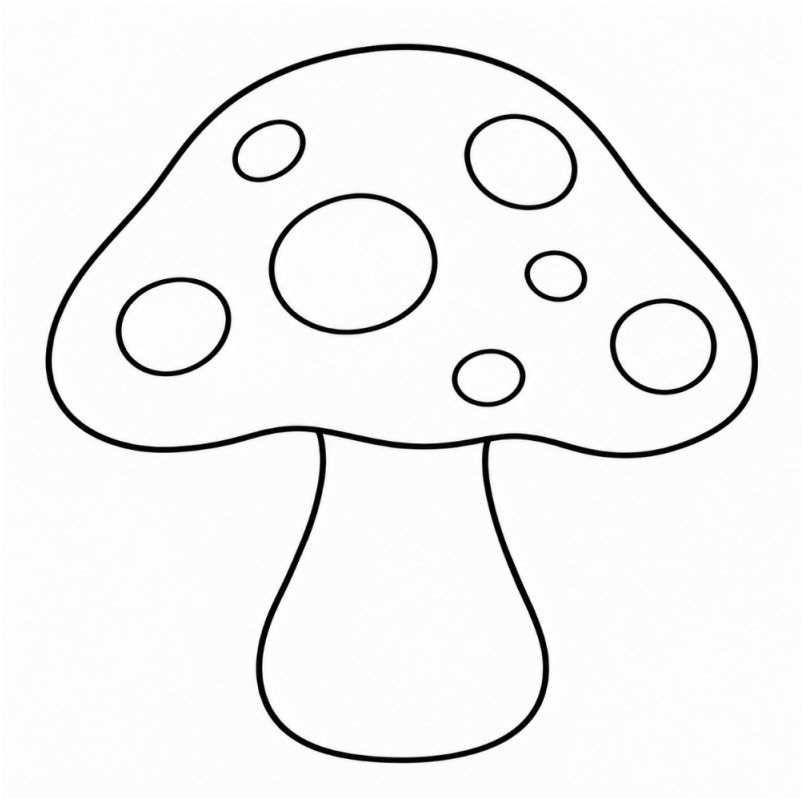

6. Add the last two spots

Place two smaller spots in the open right and lower spaces. You now have seven spots.

> Count seven closed spots, all inside the cap.

7. Check your line drawing

Check the stem joins and the clear gaps around all seven spots. There are no temporary guides to erase.

> Keep every finished outline. Coloring is optional.
